São Carlos, SP, Brazil

Profile

Statistics and Data Science undergraduate student at the Universidade Federal de São Carlos (UFSCar), expected to graduate in December 2028. CNPq Undergraduate Research Fellow with experience in statistical computing, machine learning, data analysis, and Python development. Research interests include high-dimensional data, graphical models, Random Forests, stability selection, and computational statistics. Member of PET Estatística at UFSCar.

Education

Bachelor's Degree in Statistics and Data Science **2025 – Dec. 2028 (Expected)**

Universidade Federal de São Carlos (UFSCar)

São Carlos, SP, Brazil

Weighted Average: 7.72/10

Bachelor of Science and Technology — Incomplete **2024 – 2025**

Universidade Federal do ABC (UFABC)

Santo André, SP, Brazil

Research Experience

CNPq Undergraduate Research Fellow **2026 – Present**

Universidade Federal de São Carlos (UFSCar)

Project: Genotype-phenotype graph learning using Random Forests and stability selection.

Supervisor: Prof. Dr. Thiago Ramos.

- Develop computational methods for statistical analysis of high-dimensional genetic data.
- Apply Random Forest models, variable importance methods, repeated sampling, and stability-based procedures for identifying relationships between variables.
- Build and analyze graph-based representations of statistical dependencies using Python and NetworkX.
- Develop reproducible data-processing and analysis pipelines using Python, NumPy, Pandas, and Scikit-learn.

Academic Experience

PET Estatística — External Relations Member **2026 – Present**

Universidade Federal de São Carlos (UFSCar)

- Participate in academic, scientific, and outreach activities related to Statistics and Data Science.
- Contribute to external communication, partnerships, and collaborative initiatives involving the PET Estatística group.

Selected Projects

Random Forest Importance and Stability Analysis **2026**

Python, Scikit-learn, Pandas, NumPy, NetworkX

Developed a computational pipeline for repeated Random Forest training, variable-importance analysis, stability assessment, threshold-based feature selection, and graph visualization.

Marketplace Data Analysis **2025 – Present**

Python, Pandas, NumPy, Streamlit, Plotly

Developed interactive applications for e-commerce data analysis, including product-performance monitoring, promotional analysis, multi-product comparison, and interactive data visualization.

Data Automation and Dashboard Applications

2025 – Present

Python, Streamlit, SQLite

Built applications for data processing, automation, dashboard development, API integration, and spreadsheet-based workflows.

Technical Skills

Programming: Python, SQL, R (basic)

Data Science & Machine Learning: Pandas, NumPy, Scikit-learn, Random Forests, exploratory data analysis, statistical modeling, feature importance

Data Visualization: Matplotlib, Seaborn, Plotly, NetworkX, Power BI

Applications & Data: Streamlit, SQLite, Excel, CSV, BeautifulSoup

Tools: Git, GitHub, Jupyter Notebook, Linux, LaTeX

Extracurricular Activities

INSABOTS — Robotics Team

2017 – 2020

Robotics

Participated in robotics projects and competitions, including FIRST LEGO League (FLL) and the Brazilian Robotics Olympiad (OBR).

Languages

Portuguese: Native

English: Advanced
